

Identity Providers compatible with Trusted Connection

The following table outlines the supported Identity Providers with Trusted Connection

While there are some similarities between how different Identity Management System (IDM) applications work and the required information that needs to be shared with Trusted Connection to allow for the IDM to sync, there are enough differences that it can be confusing. The following table outlines the available IDM products and a high level view of the approach to integration with Trusted Connection for both SAML and LDAP.

Identity Providers	Supported Protocol	Group Creation (Manual / Automated)
Microsoft EntraID	SAML	Manual
Okta	SAML	Manual
Okta	SAML + LDAP	Automated
PingID	SAML	Manual
Windows AD/OpenLDAP	LDAP	Automated
Others*	SAML or LDAP	Manual or Automated

*Other Identity Providers may be applicable if SAML or LDAP are supported
