

MobileWall Education

CIPA-Compliant Mobile Protection

MobileWall Education is a Trusted Partner for More Than 800 School Districts

Safe Mobile Internet

Through its use of next-generation Children's Internet Protection Act (CIPA) firewall filtering, MobileWall Education protects students in learning environments outside the classroom.

Children's Internet Protection Act Filtering

Next-generation cloud firewalls provide Children's Internet Protection Act filtering to create safe learning environments and adhere to compliance regulations. Deployed on demand at the carrier network level, MobileWall ensures data is always filtered, unlike DNS content filtering solutions that are easy for students to circumvent. No device application is required.

Usage Monitoring and Reporting

The MobileWall Portal provides easy-to-use reporting tools to automate monitoring, alerting, and reporting of mobile data traffic. Built-in data analytics provide usage trends, such as which educational resources are being utilized and what non-CIPA-compliant traffic is being blocked.

Secure Cloud Architecture

Multi-layered cloud security such as secure private network and advanced threat protection systems hide traffic from outside malicious actors and identify and mitigate potential security threats in real time, enhancing the overall security of your IT infrastructure.

At No Additional Cost, MobileWall Also Provides

- ✔ Malware Threat Protection
- ✔ Data Cost Management
- ✔ Portal Reporting
- ✔ Event Alerting
- ✔ Speed Optimization
